AccuVeyor

Variable Speed Conveyor Systems

Accutek manufactures both open top standard conveyors and closed top sanitary conveyors that can be customized to any length or width. Each is made with heavy-duty stainless steel, height adjustable stands, and variable speed drives. The belts are made from either poly-plastics or stainless steel. Stock conveyor beltways are available in 4.5", 6", and 12" widths. All lengths and widths are available in both the open top and closed top sanitary designs.

OPEN TOP: The industry standard for heavy duty tabletop conveyors, features inverted "L" side frames to provide rigid chain and guide rail bracket support.

CLOSED TOP: (Sanitary) Intended use for when easy cleanup is required. The closed top, raised wear-strip design blocks any spilled product from becoming trapped inside the frame. A simple wash down will normally remove any spilled product. The sanitary design includes a wash down motor and sealed bearing design.

1 Fill speed is dependent on several things: model, operator, container dimensions, and product characteristics.
2 Optional parts of programming may be needed to match the specialty product specifications.
